SUMMARY

GenAI-focused Technical Lead with 16+ years of experience in building scalable cloud-native applications and enabling AI-augmented software development. Specialized in Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), and agentic workflows to enhance developer productivity and software delivery.

Proven experience in integrating GenAI capabilities into enterprise systems, designing prompt-driven workflows, and building reusable AI components for code generation, documentation, and decision support. Passionate about driving adoption of AI-assisted engineering practices and evolving teams towards AI-augmented SDLC.

Strong background in Java, Python, AWS, and microservices architecture, with a focus on performance, scalability, and reliability.

SKILLS

GenAI & AI Engineering

- Large Language Models (LLMs), RAG, Agentic Workflows
- Prompt Engineering, Context Engineering
- AI-Augmented Development

Languages & Frameworks

- Java (Spring Boot), Python

Cloud & Data

- AWS (Lambda, S3, DynamoDB, RDS), PostgreSQL

Architecture

- Microservices, Event-Driven Systems

DevOps

- CI/CD, Docker

WORK EXPERIENCE

Tech Mahindra, Bangalore

April 2025 - Present

Technical Lead

Led development of **AI-enabled backend systems** using Java, Python, and AWS

Integrated **LLM and RAG-based solutions** into enterprise workflows to enhance decision-making and automation

Drove adoption of **AI-assisted coding tools** within the team, improving development efficiency

Collaborated with cross-functional teams to identify **GenAI use cases and implementation strategies**

Mentored engineers on **prompt engineering and effective usage of GenAI tools**

Philips India, Bangalore

May 2022 - March 2025

Software Technologist

Designed scalable microservices and **integrated AI-driven components** for intelligent data processing

Built **LLM-powered features** for summarization and insights generation

Contributed to **early experimentation with GenAI workflows** within engineering teams

Partnered with stakeholders to align **AI capabilities with business use cases**

Mphasis

May 2015 - April 2022

Delivery Module Lead

Led a team delivering microservices-based applications while introducing **automation and AI-assisted practices**

Improved engineering efficiency through **tooling, reusable components, and process optimization**

Mentored developers and contributed to **knowledge sharing across teams**

EDUCATION

Vishveshwarya technology university

Aug 2007 - Jun 2010

Master's degree in Computer Applications (MCA)

- Major in Computer Applications. Thesis on "Readable Output Generation using Secab parsers".

GenAI & AI-Augmented Engineering Experience

- Designed and implemented **RAG-based systems** using LLMs for knowledge retrieval and contextual decision-making
- Built and experimented with **agent-based workflows** for task automation and multi-step reasoning
- Developed **prompt engineering strategies** to improve output quality, consistency, and reliability
- Integrated LLM capabilities into applications for **code generation, summarization, and documentation automation**
- Evaluated GenAI tools (e.g., GitHub Copilot, LLM APIs) for improving **developer productivity**
- Explored **AI-assisted SDLC workflows** including automated testing, documentation, and code reviews

PROJECTS

UNIGY April 2025

- Developed REST-based microservices with Spring and Java on in-house cloud infrastructure, boosting system scalability and minimizing latency in high-frequency trading workflows.
- Designed and implemented a real-time cross-data-center entity replication pipeline using Apache Kafka (3.0.0) as the transport layer, enabling sub-second propagation of configuration and user changes across geographically distributed Active/Standby portal zones in a high-availability telecom platform.

Philips Onespace April 2024

- Managing approval workflow from “production readiness” of various philips application to making it available for a particular market/geography.
- Onboarding customers and users within the hospital (such as a radiologist, clinician, hospital admin etc) such that they can start registering & using the new application.
- Identity and Access Management solutions used by the applications.
- Entitlements and contract management with hospitals.

Philips Remote Service October 2023

- Supports Reactive & proactive remote service for Philips medical equipment installed at health care facilities around the world.
- Ability to launch remote service applications using RSN or PSA or IoTHub based connectivity.
- Ability to download or receive files from devices in the hospitals using RSN or PSA or IoTHub based connectivity.
- Ability to distribute the software packages to devices in the hospitals remotely using PSA or IoT Hub based connectivity.
- Ability to raise alerts (either One EMS case or Email) using PSA or IoT Hub based connectivity.
